

Marking Systems

NewPro provides various highly concentrated pigment preparations of lawn marking colours for stadiums and sport fields. They are dilutable with water in different ratios. They dry very quickly, remain adherent to the turf over an extensive period and process superb water resistance properties on the turf. They can be applied for example with the EasyLiner, a four wheeled, battery-operated Turf marking machine with stable construction. The product range also includes a pigment concentration, called NewPro Golf course marking paint, that can be applied for the treatment of stains on natural lawn, e.g. sports turfs, golf courses, parks or decorative lawns.

Lawn Marking Machine

In order to get a neat, straight line we suggest to apply NewPro Lawn Marking Colour with a four-wheeled, battery operated marking machine, for example with our EasyLiner. Its stable construction on four wheels keeps it on track and its handling is simple. The paints are sprayed evenly on the turf via an electric pump driven by a rechargeable battery.

An overview of the main features of our EasyLiner:

- Stable construction on 4 wheels
- Battery-operated pump with
- maintenance free gel-battery
- simple of double spraying device
